

To our dear Parenthesis,

Your moody embraces are wasted on these crowds of words shackled up together in bulky sentences. Change to coding where we numbers and characters appreciate a good partitioning.

Despite your lone-wolf impression, we know you miss your family. Bring your brothers and cousins too (round, square, curly, or chevron); there is a place for every one of them.

Those other punctuation think you're a joke. The comma pair and em dash pair believe they can do your job better; the question mark, full stop, comma, and all the rest are too fickle for a healthy relationship: they change their mind (about sitting in your arms) according to the context of the sentence.

Please, think about your own happiness: they don't appreciate you, but we do. We know how you're supposed to be used: indeed, we can't run without you. We depend on you to make sense of our methods and parameters.

Join us, dearest. While we may work you hard, we will never leave you hanging or use you inappropriately.

Int and Char.

```
-----  
  
For (Language L = <Grammar>) {  
    If (Grammar.Parenthesis == Fed_Up) {  
        Coding.add(Grammar.Parenthesis);  
        Grammar.drop(Parenthesis);  
        L = <Coding>;  
    }  
}  
end article;
```
